## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

2. The information disclosure statement filed 7/22/03 fails to comply with 37 CFR 1.98(a)(1), which requires a list of all patents, publications, or other information submitted for consideration by the Office. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Zak (5,631,814).

Zak discloses an uninterruptible power supply based on non-invasive connection of backup circuit to switch power supply in Fig. 1. An uninterruptible power system (10) for inputting an AC power (13), converting the AC power into a desired power supplying the desired power to a load (connected to the output of the DC-DC converter 21), and upon occurrence of an AC failure, converting a power from energy accumulation means (25 and 26) into the desired power and supplying the desired power to the load, wherein

the power from said energy accumulation means is passed through two serially connected boost means (PFC and 27) and thereafter the power is converted into the desired power to be supplied to the load, a rectification circuit (16) and suppressing input current harmonics (15), to detect the presence or absence of voltage across the main AC power line a detector circuit (60), DC-DC converter (21) and the AC main power (13) connected to a 2- way ON-OFF switch (14).

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1-18 are rejected under 35 U.S.C. 102(a) as being anticipated by Tokunga et al. (6,507,507).

Tokunaga et al. disclose a Dc power supply device in Fig. 1. An uninterruptible power system (200) for inputting an AC power (AC INPUT), converting the AC power into a desired power supplying the desired power to a load (5), and upon occurrence of an AC failure, converting a power from energy accumulation means (4) into the desired power and supplying the desired power to the load, wherein the power from said energy accumulation means is passed through two serially connected boost means (31 and 12-14) and thereafter the power is converted into the desired power to be supplied to the load, a rectification circuit (11) and suppressing input current harmonics (11), to detect the presence or absence of voltage across the main AC power line a detector circuit (16), control circuit (100) and DC-DC Converter (2).

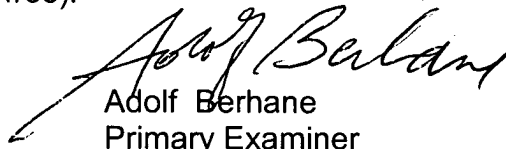

**Conclusion**

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stich et al. disclose a back up uninterruptible power system. Faberman et al. disclose an uninterruptible power supply with direction of DC electrical energy depending on predetermined ratio. Kissel disclose an apparatus and method for monitoring backup battery flow charge.
